Projects:

▪ SMART SHOPPING LIST: 🔗

An application where the user can enter their typical recurring items via search or bar scan and their favorite stores, organized in different lists with optional timers to remind the user when they may have run out of a product. It uses Python as a web scraper, C++ as the backend, Java as the local app front end, and PHP as the web app front end.

▪ MD5 SUM CHECKER 1.0/2.0: 🔗

A C++ command line application where the user can find the MD5 of all files in a folder and either compare the files to another instance, output the sums in a text document, or compare the files to a previous text file. Version 2.0 adds a GUI and the ability to check different instances of the directory.

▪ CLOUD STORAGE UPDATER: 🔗

An application that detects file changes in a local directory and uploads the files to a cloud storage web app using Java
